

1  
I claim:

1. A method for tracking and reporting traffic activity on a web site, comprising:  
storing a web page on a first server coupled to a network;  
5 requesting the web page from a visitor computer;  
selecting the visitor computer and/or visitor for inclusion or non-inclusion within a  
sample group, said sample group being a subset of total traffic to the web site;  
storing on the visitor computer a selection indicator associating with the inclusion or  
non-inclusion; and  
10 tracking traffic activity to the web site from the visitor computer and/or visitor only if  
the visitor computer and/or visitor is a member within the sample group, otherwise ignoring  
the traffic activity from the visitor computer and/or visitor.

2. The method of claim 1, wherein the web page includes web page code, data  
15 mining code, and cookie processing script, the method further including the step of operating  
the cookie processing script on the visitor computer to generate the selection indicator.

3. The method of claim 1, the method further including:  
storing cookie processing script on a second server;  
20 receiving a request from the visitor computer at the second server;  
operating the cookie processing script responsive to the request to generate the  
selection indicator; and  
returning the selection indicator to the visitor computer for storage.

4. The method of claim 1, wherein the first server includes cookie processing  
25 script, the method further including the steps of:  
operating the cookie processing script responsive to the requesting step to generate  
the selection indicator; and  
returning the selection indicator to the visitor computer for storage.  
30

5. The method of claim 4, further including the steps of:  
embedding an image request within the web page;  
causing the image request to be sent to a second server;  
returning an image responsive to the image request; and  
setting the selection indicator responsive to the image.

6. The method of claim 1, further including the steps of:  
receiving an image at the visitor computer responsive to the web page request; and  
setting the selection indicator to "true" at the visitor computer responsive to a first  
type of received image, otherwise setting the selection indicator to "false" responsive to a  
second type of image, wherein the image type is one selected from the group consisting of  
size or color.

7. The method of claim 6, wherein the selection indicator is set to "true" at the  
visitor computer responsive to the received image being 1x1 pixel in size, and wherein the  
selection indicator is set to "false" responsive to the received image being 1x2 pixels in size.

8. The method of claim 6, wherein the selection indicator is set to "true"  
responsive to the received image having a first color, and wherein the selection indicator is  
set to "false" responsive to received image having a second color.

9. The method of claim 1, further including the steps of:  
setting a normalization multiplier in accordance with a ratio between the sample  
group and the total traffic on the web site;  
normalizing the traffic activity by a normalization multiplier; and  
posting the report including the normalized traffic activity for viewing over the  
network.

10. A method for tracking and reporting traffic activity on a web site comprising  
the steps of:  
storing a web page on a first server coupled to a wide area network, said web page  
having web page code and data mining code including a cookie processing script;  
uploading the web page to a visitor computer responsive to a request over the wide  
area network from the visitor computer;

operating the cookie processing script on the web browsing data to obtain at least one new cookie value, said new cookie value including a visitor selection value; and storing the new cookie on the visitor computer including the new cookie value.

5           11.     The method of claim 10, further including the step of operating the data mining code on the visitor computer to obtain web browsing data responsive to the visitor selection value.

10           12.     The method of claim 10, further including the step of operating the data mining code on the visitor computer to obtain web browsing data if the visitor selection value is set to "true", otherwise not operating the data mining code on the visitor computer.

15           13.     The method of claim 10, further including the steps of:  
attaching the new cookie value to an image request associated with a designated URL source; and  
sending the image request to the URL source.

20           14.     The method of claim 10, further including the steps of:  
operating the data mining code on the visitor computer to obtain web browsing data;  
compiling the web browsing data into a web page traffic report; and  
posting the report for viewing over the wide area network.

25           15.     A method for tracking and reporting traffic activity on a web site stored on a web site server, comprising:

receiving a request at the web site server for a web page from a visitor computer;  
determining whether the request is classified within a sample group; and  
returning the web page and associated data mining code for operating on the visitor computer if the request is within the sample group, otherwise returning just the web page.

30           16.     The method of claim 15, further including:  
receiving with the request a cookie including a selection indicator; and  
determining whether the request is classified within the sample group responsive to a value of the selection indicator.

17. The method of claim 15, further including:  
generating a selection indicator responsive to the request; and  
returning the selection indicator to the visitor computer together with the web page.

5 18. The method of claim 17, further including storing the selection indicator as a  
cookie within the visitor computer.
